About

Developer studying Software Engineering and seeking opportunities to enhance professional skills.

Skills

Experience in API development using Python and Flask, building user interfaces with markup languages using HTML and CSS, Certification by FGV in Git for Code Versioning and Collaborative Work with GitFlow. Understanding of Object-Oriented Programming (OOP) principles, focusing on modeling and developing applications in Java. Knowledge in applying agile methodologies for project management and optimizing the software development lifecycle. Experience in AI-assisted development and SDD (Spec-Driven Development) methodologies, with practical application of autonomous agents such as OpenCode and Google Antigravity. Server fundamentals focused on Ubuntu Server, advanced knowledge in Linux, Operating Systems, and low-level programming with C and Assembly.

Experience

Freelancer – Landing page development – January 2026 – February 2026

Prototyping and creation of a landing page for a sports jersey store using HTML, CSS, and JavaScript, with WhatsApp integration for orders and DNS management.

Software Development – Bread of Life Application – February 2026

Creation of a Bible study software with a modern GUI in Python using CustomTkinter and artificial intelligence integration using the Google Gemini API for integrated chat queries.

Web Development – Clinic CRUD App – May 2026 – June 2026

Construction of a web application with CRUD architecture using Flask, aimed at managing small clinics, with persistent data storage, data validation and processing, and building user interfaces in HTML and CSS.

Education and Languages

Software Engineering: UNIFSA – Centro Universitário Santo Agostinho – August 2025

Programming logic, Python, C, and Java.

Native Portuguese and advanced English.
